A.F. A.F. Changeris of a novel P2 nucleotide receptor
A.F. A.F. Changeris of an ovel P2 nucleotide receptor
A.F. Changeris of B1051665; NID: 91066007; PIDN: BAA09816.1; PID: 91066008
C. Superfamily: ATP receptor P2u
C. Keywords: G protein-coupled receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  185 LATHYMPYGMALTVIGFLLPFAALLACY--CLLACRLCRODGPAEPVAOERRGKAARMAV 242

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: Orphan receptor.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           O'Dowd B.F.;
"A cluster of four novel human G protein-coupled receptor genes occurring in close proximity to CD22 gene on chromosome 19q13.1.";

Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).
-1- FUNCTION: Orphan receptor.
-1- SUBCELLULAR LOCATION: Integral membrane protein.
-1- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                  "A cluster of four novel human G protein-coupled receptor genes occurring in close proximity to CD22 gene on chromosome 19q13.1."; Biochem. Biophys. Res. Commun. 239:543-547(1997).

coupled
                     G proteins that stimulate phosphoinositide hydrolysis.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- PTM: A proteolytic cleavage generates a new amino terminus that functions as a tethered ligand.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BY SIMILARITY.

J. Clin. Invest. 103:879-887(1999).
-!-FUNCTION: Receptor for activated thrombin or trypsin coupled to G proteins that stimulate phosphoinositide hydrolysis. May play a role in platelets activation.
-!- SUBCELLUIAR LOCATION: Integral membrane protein.
-!- TISSUE SPECTFICITY: Widely expressed, with highest levels in lung, pancreas, thyroid, testis and small intestine. Not expressed in brain, kidney, spinal cord and peripheral blood leukocytes. Also detected in platelets.

Nat. Genet. 23:373-373 (1999).

1- Genet. 23:373-373 (1999).

1- FUNCION: High affinity receptor for activated thrombin coupled to g proteins that estimulate phosphoinositide hydrolysis. May play a role in platelets activation and in vascular development.

1- SUBCELLUIAR LOCATION: Integral membrane protein.

1- TISSUE SPECIFICITY: Platelets and vascular endothelial cells.

1- FTM: A proteolytic cleavage generates a new amino terminus that functions as a terhered ligand.

1- FTM: Phosphorylated; probably mediating desenzitisation prior to the uncoupling and internalization of the receptor.

1- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RGO; GO: 0005794; C: Golgi apparatus; TAS.

-i- SUBCELLULAR LOCATION: Integral membrane protein.
-i- TISSUB SPECIFICITY: LIVER AND THE BRAIN REGIONS THALAMUS, PUTAMEN, AND CANDATE, BUT NOT IN PRONTAL CORTEX, PONS AND HYPOTHALAMUS.
-i- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              14 AAFALGFPLNVLAIRGATAHARLRLTPSLVYALNLGCSDLLLTVSLPLK-AVEALASG--

Pharmacol. 54:541-546(1998).

-!- FUNCTION: RECEPTOR FOR EXTRACELLULAR UDP > ADP = UTP. THE ACTIVITY
OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVATE A
PHOSPHATIDYLINOSITOL-CALCING SECOND MESSENGER SYSTEM.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      272 YYFSA----FSAVFFLVPLISTICYMSIIRCLSSSSVANRSKKSRALFLSAAVFCVF

"Structure and localization of the thrombin receptor gene on mouse chromosome 13.";
Mamm. Genome 7:625-626(1996).
-!- FUNCTION: High affinity receptor for activated thrombin coupled to G proceins that stimulate phosphoinositide hydrolysis.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- PTM: A proteolytic cleavage generates a new amino terminus that functions as a tethered ligand.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                               REMOVED FOR RECEPTOR ACTIVATION (B SIMILARITY).

Niznik H.B., Srikant C.B., Patel Y.C.;
"Molecular cloning, functional characterization, and chromosomal localization of a human somatostatin receptor (somatostatin receptor type 5) with preferential affinity for somatostatin-28.",
Mol. Pharmacol. 45:417-427(1994).
-!- FUNCTION: Receptor for somatostatin-28. The activity of this receptor is mediated by G proteins which inhibit adenylyl cyclase.-!- SUBCELIULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Prominent in the pituitary and small intestine. Low levels in islets and spleen. Not detected in kidney, pancreas, cerebellum, or cortex.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

TISSUB SPECIFICITY: Neutrophils.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
CAUTION: Was originally (Ref.2) thought to be the receptor fMet-Leu-Phe (N-formyl peptide receptor).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Oryccolagus cuniculus (Rabbit).
